

Foaming Drain Line Solution

Good Morning, _____.

I just completed my weekly Sani-Service and if you have just a minute, would you like to inspect my work?

(NOTE: If manager/owner does not wish to visit restroom, proceed to narrative after step 6)

It is a 6-step process:

1. I maintain your air fresheners.
2. I manage and refill all your hand soap dispensers.
3. I clean or replace your urinal screens.
4. I use Blue Planet HIOX to clean, sanitize and disinfect the toilets, sinks and urinals.
5. I apply our Sani-Shield protective barrier to your toilet, sinks and urinals.
6. Finally, I apply our Sani-Guard process using an electrostatic sprayer.

In performing the service, I noticed some fruit flies and a strange odor coming from your floor drain(s) in the restroom(s), have you noticed this lately?

Fruit Flies have found a food source as well as a place to breed in your floor drains and if not controlled, will spread throughout your facility. Part of my job is to look out for my customers; helping them improve the appearance within their facility by reducing odors, germs, bacteria, etc., while saving them money.

Our Foaming Drain Service can treat all your drains every week. We will inject foam into each of your drains treating the entire inside surface of the pipe as the foam travels through the drain system to the grease trap.

This weekly treatment will reduce the food source and breeding ground for flies and foul odors, which is different from pouring chemicals down the drain.

Best of all when we are done, your facility will smell great!

Once the initial treatment is completed, this service will occur on my weekly visit. Also, I advise that you do not use bleach in any drain in your facility, as it will reduce the effectiveness of our Foaming Drain Line Service.

Do you have any reason you wouldn't want to do this today?
